You will need to create a POST command on the external pages.

First, you will need to make sure that the product exists in your shopping cart database.

Then, you would need to add the follow code to the external pages for every instance where an item is to be added.

```
<form action="http://www.sitename.com/index.php" method=POST>  
<input type="hidden" name="oa" value="AddItem"/>  
<input type="hidden" name="oa_id" value="1"/>  
<input type="text" name="oa_quantity" value="1"/>  
<input type="submit" style="width:100px;" value="Add To Cart" />  
</form>
```

Key to above code:

path - web URL to your cart's index.php

oa_id - product ID in database

oa_quantity - product quantity,
